TAPER PLUG VALVES

Figure Numbering

This catalogue covers standard straightway in the Taper Plug design to the ANSI pressure class 150 - 300 - 600 - 900 - 1500 and 2500.

For information on valve types not covered by this catalogue, please contact our sole agent/representative in your country.

To identify the correct type of valve, please use the PR-figure number key on the following page, by means of which the valve figure number is specified in the shape of letters and digits.

When sending inquiries or orders to the supplier/representatives, it is important to state the exact details of the service (working conditions). Therefore, additional to the figure number, quantity and size, please state the following information:

- Nature of service
- Range of temperature
- Normal working pressure
- Type of flanges (raised face/ring joint or other)
- Dimension of pipe (only when valves have butt or socket welding ends)
- Accessories, if any.

TAPER TWIN PLUG VALVES

List of Standards

The Standards printed in bold print is to be considered as the main standard (specification). The below standards in thin print originate from the main standard. Each main standard has its own reference. The list of standard practice is only intended as a guide.

List of Standard Practice	
BS 5353	Specification for steel plug valves
BS 1560	Circular Flange for Pipes, Valves and Fittings (Class designated)
BS 4504	Circular Flange for Pipes, Valves and Fittings (PN designated)
BS 21	Pipe Threads
BS 2080	Face-to-Face, Centre-to-Face, End-to-End and Centre-to-End dimensions of valves
BS 6755	Testing of Valve Part 1 Specification for production pressure testing requirements.
ASME B 16.34	Valves – Flanged, Threaded and Welding Ends
ASME B 16.5	Pipe Flanges and Flanged Fittings
ASME B 16.11	Forged Fittings, Socket-Welding and Threaded Ends
ASME B 16.25	Buttwelding Ends
ASME B 1.20.1	Pipe Threads, General Purpose (Inch)
ASME B 16.10	Face-to-Face and End-to-End Dimensions of Valves
API 6D	Specification for Pipeline Valves (Gate, Plug, Ball and Check Valves)
ASME B 16.5	Pipe Flanges and Flanged Fittings
ASME B 31.4	Liquid Petroleum Transportation Piping Systems
ASME B 31.8	Gas Transmission and Distribution Piping Systems
API 599	Metal Plug Valves – Flanged and Welding Ends
API 598	Valve Inspection and Test.
ASME B 16.5	Pipe Flanges and Flanged Fittings.
ASME B 16.25	Buttwelding Ends
ASME B 16.10	Face-to-Face and End-to-End Dimensions of Valves.
ASME B 16.34	Valves – Flanged, Threaded and Welding Ends.
API 6A	Specification for Wellhead and Christmas Tree Equipment.
Quality management systems	Design and manufacture of valves for liquid and gaseous applications on onshore and offshore installation in acc. to Pressure Equipment, Directive 97/23/EC Design and manufacture of valves and associated pipe fittings ISO 9001 American Petroleum institute 6A American Petroleum institute 6D
NACE MR01-75	Standard Material Requirements Sulfide Stress Cracking Resistant – Metallic. Materials for Oilfield Equipment. The NACE MR01-75 standard can be connected to every main standard (printed with bold) provided that the choice of material is acceptable to the NACE MR01-75 standard
API 607	Fire Test for Soft-Seated Ball Valves.
API 6FA	Specification for Fire Test for Valves.
BS 6755	Testing of Valves Part 2 Specification for fire type-testing requirements.
ISO 10497	Testing of Valves – Fire Type – testing requirements. These Fire Test standards can be connected to every main standard.

The PR lubricated taper plug valve group 5 is the ideal shut off device for almost any medium, even under the most severe operating conditions.

It can be used in most places where fast, trouble-free and efficient sealing is required. The design is very compact, it requires little space to install and can be mounted in any position required. Since the only moving parts are the plug and the stem, the basic operation of the PR valve is very simple. When the plug is turned 90°, the valve moves from closed to open position - and vice versa.

The plug is tapered 1:6 and is individually fitted to the valve body with very close tolerances. It incorporates Metal to Metal sealing, which means that no soft seal will be damaged by the flowing medium.

As a secondary seal, the valve is provided with a lubrication system which allows feeding a special lubricant into the valve while the valve is in operation.

Besides sealing, the purpose of the lubricant is to protect the internals of the valve against corrosion and wear as well as reducing the valve torque.

The valve is manufactured in the "Pressure Balanced Design", this means that the plug is provided with pressure balance holes which ensure that the plug is always in axial balance and consequently prevents the plug from taper locking. Furthermore, in order to reduce the valve torque, the surface of the (tapered) plug is coated with P.T.F.E.

The plug and the operating stem are two separate parts which are connected by means of an equalizer ring acting as universal joint. The stem is Blowout-proof. This means the only way to remove it is from the bottom after valve is disassembled.

With three independent seals the sealing of the PR valve is unique. This is made up of a reinforced P.T.F.E. thrust plate (6) followed by a 100% pure graphite seal with a stainless steel back-up ring (41).

The graphite seal is very efficient at extremely high temperatures and meets the most strict demands of several different standards

relative to fire safe design.

At the top of the stem, the primary seal is placed (4). This sealing ring is a P.T.F.E. (teflon) sealing ring with an embedded spring of Hasteloy C. The ring can be replaced from the outside. The sealing ring is kept in place by the stem bearing (2) and the snap ring/ locking ring (25).

In addition to the stemseals mentioned, the wrench operated valve has a weatherproof seal (3) to prevent penetration of water and dirt into the stem.

The bottom cover (9) is bolted on the valve body with the studs (13a) and the nuts (13). Two flexible plates or diaphragms (15) + 28) are placed in a recess between the valve body and the bottom cover. They function as a metal seal between the valve body and the bottom cover and also prevent the medium from leaking at the adjustment arrangement consisting of the pressure screw (11), the retaining ring (14) and the bottom screw (12). The plug is adjusted within the valve body by means of the pressure screw (11) and is kept in place by the retaining ring (14) when the bottom screw (12) is tightened. All adjustments to the plug are accomplished by a "flexing" of the two diaphragms.

As mentioned, the valve is provided with a lubrication system which allows penetration of special lubricant into the valve through lubricant screws (24) and check valves (21 + 48). The lubricant is injected into a network of grooves by means of a special high pressure lubricant gun. This network system ensures that all seal faces are supplied with a thin coat of lubricant and by so doing becomes an efficient secondary seal.

The PR valves can be supplied as wrench operated or gear operated valves.

Moreover the valves can be supplied with top-flange and stem for mounting of any kind of actuator.

If the valve is supplied with such a top flange, the lubrication injection system is moved from the stem to the side of the valve body.

TAPER PLUG VALVES

Pattern

PR valves are available in a wide range of variants as described in the valve standards.

In API 6D, API 599 and BS 5353, the variants are defined as Short Pattern, Regular Pattern, Venturi Pattern and Full Bore Pattern, respectively.

The different variants refer to face to face dimension, plug port and shape.

Venturi Pattern

These valves have face-to-face dimensions in accordance with the appropriate British and American standards where applicable, in order to ensure the maximum interchangeability between different valves.

The plug ports of these valves are of reduced area, but the change of section through the body throat is so designed as to produce a Venturi effect to restore a large percentage of the velocity head losses through the valve, thus resulting in a relatively low pressure drop. These valves are ideally suited for all normal pipeline applications, particularly in the larger sizes where there is a considerable saving in cost.

Regular Full Bore Pattern.

These valves have face-to-face dimensions in accordance with the appropriate British and American standards where applicable.

This ensures the maximum interchangeability between valves of different types and end connections.

The plug ports of these valves are approximately rectangular in section and have an area corresponding to the round end connection of the valve, furthermore they have an extremely low pressure drop. The transition from the round body end ports to the rectangular seat ports is smooth, and entails no sudden alterations in shape or section which might cause excessive changes in velocity or direction of the fluid flowing in the pipeline.

Short Pattern

These valves have the same face-to-face dimension as gate valves according to ANSI B 16.10 in class 125, 150, 250 and 300.

In order to obtain the relatively short face-to-face dimension, the plug port is reduced and has a rectangular slightly tapered-shape.

Regular Pattern

These valves have face-to-face dimensions in accordance with the appropriate British and American standards where applicable.

This ensures the maximum interchangeability between valves of different types and end connections. The plug ports of these valves have a rectangular - slightly tapered shape in section and have an area larger than Venturi Pattern. The transition from the round body end ports to the rectangular seat ports is smooth, and entails no sudden alterations in shape or section which might cause excessive changes in velocity or direction of the fluid flowing in the pipeline.

Regular Round Full Bore Pattern

These have circular ports, the diameter of which, unless otherwise stated, is equal to, or greater than, the inside diameter of the corresponding pipe. The valves are intended for use when it is necessary to pass a scraper or other tool through the valve body, or for other special applications.

The face-to-face dimension are greater than for the corresponding Regular Pattern valve but comply with British and American Standards where applicable. This type valve is particularly suited for raw sludge application in sewage treatment plants, hot taps for pipe line etc.

TAPER PLUG VALVES

Operation

The simplest method of operating the PR valve is by using a wrench directly on top of the valve plug.

Straight-way valves open and close by rotating through 90° while three-way valves have rotary motions through 90° - 180° - 270° - 360°.

The wrench can be fitted on the square of the valve plug in eight different positions. This is a big advantage in places with limited space.

The wrench is available in a short and a long version as type 8K and type 8L.

Wrench operation is used on relatively small valve sizes, as indicated on the dimension sheets.

Gear, type C, is enclosed in a water—proof casing, with the hand-wheel located vertically on side of the valve.

Worm and worm wheel are embedded in heavy bronze bearings, and the axial load stress is absorbed by ball bearings.

Both bearings and tooth racks are lubricated with concentrated molybdenum grease to resist high temperatures. (See lubrication of gear, page A9).

The gear has fixed stops at extreme position, plus position indicator.

Gear, type C, is available in all pressure classes and valve sizes.

Type C can be fitted with electric, pneumatic or hydraulic actuator.

Gear, type D, is enclosed in a water—proof casing, with the hand-wheel located horizontally on top of the valve.

Worm and worm wheel are embedded in heavy bronze bearings, and the axial load stress is absorbed by ball bearings.

Both bearings and tooth racks are lubricated with concentrated molybdenum grease to resist high temperatures. (See lubrication of gear, page A9).

The gear has fixed stops at extreme positions, plus position indicator.

Gear, type D, is available in all pressure classes. (For valve sizes—see dimension sheets).

Gear, type D, can be fitted with electric, pneumatic or hydraulic actuator.

TAPER PLUG VALVES

Connections

Screwed Ends:

Designed in accordance with API Line Pipe threads (Taper) API Std. 5B Table 2.1 or ANSI Std. B1.20.1. Available in size 1/2" to 4".

Flanges:

Designed in accordance with the ANSI standard, as indicated on the dimension sheets. Unless otherwise specified, all flanges are supplied with Raised Face. The surface of the raised face is in accordance with the MSS SP-6 standard.

Butt Welding Ends:

For direct welding in the pipeline. Designed in accordance with ANSI B 16.25.

Socket-Welding Ends:

For direct welding in the pipeline. Designed in accordance with ANSI B 16.11. Dimension, page F19. Available in sizes 1/2" to 4".

Other types of connections such as ring joint, clamps, connections from a specific manufacturer, etc., can also be delivered. (For instance graylock, spolock, destec etc).

The PR valve is grease packed, i.e. the plug rests on a lubricating film in the valve body.

The lubricant has three functions: to protect the internal closing surfaces of the valve from corrosion, to grease seal the valve, and to contribute to easy handling. With an eye to achieving the best possible action, it is therefore important to relubricate the valve. The number of relubrication will depend on the operating conditions and the demands made on sealing.

Thus a valve operating at high temperature is to be lubricated more frequently than a valve operating at low temperature. If frequently handled, the valve is to be lubricated more often, too, to obtain a good sealing.

As the lubricant dries up faster at rising temperatures, the below time intervals indicate when relubrication should take place.

Temp. between	up to 90°C up to 200°F	90 to 120°C 200 to 250°F	120 to 150°C 250 to 300°F	150 to 180°C 300 to 350°F	180 to 200°C 350 to 400°F
Time interval	24 mo.	12 - 18 mo.	8 - 12 mo.	4 - 8 mo.	2 - 4 mo.

There is PR Lubricant for each flow medium (see lubrication chart).

It is therefore important to relubricate the valve with the proper type. If the valve is ordered specifically for a given medium, then the type of lubricant is stamped on the hexagonal head of the lubricating nipple.

Use only original PR Lubricant.

Lubrication: ●

Lubricant gun (Manual or automatic). The best and fastest results is achieved by using a PR Lubricant Gun (see fig. 1). The lubricating nipple (push on connection) on the lubricant gun is fastened directly to the lubricating nipple.

Gear Lubrication: ●

Gear lubrication follows the "principle of dry lubrication", i.e. to the teeth and worms a layer of antiseizing compound is applied, while the gear bearings are lubricated through lubricating nipples by applying. The gear is lubricated at the factory and normally needs no lubrication.

Relubrication of gear:

The gear bearings are lubricated through grease nipples. (See fig. 2)

The gear tooth racks on worms and worm wheels are, as a rule, never relubricated. However, in case of trouble of control, making handling difficult, a penetrating and almost screaming sound will indicate a lack of lubrication. In such cases, a relubrication of the tooth racks is necessary.

For gear type C or D, a removal of the gear cover is necessary to make the gear parts accessible. The lubricating paste is then applied to all tooth racks of both worms and worm wheels in a layer of about 1 millimetre (1/32"). Use a little filling spatula for application.

Recommended for use by the factory are:

For bearings, worms and gears:
BCH G10.

Fig.2

TAPER PLUG VALVES

Sealing compound
recommendations

Standard Lubricants - mainly to be used.

Lubricant no. PR	Colour of compound	Temperature Range		RECOMMENDATIONS
		C	F	
80	Black	- 10 + 180	+ 14 + 356	Cold and hot water up to 180°C, conditional up to 200°C. Cold and hot air. 50% lye up to 50°C conditional up to 100°C, 50% acids up to 50°C, inorganic saline solutions up to 100°C, steam conditional up to 200°C. Suitable for town gas, propane, butane and natural gas. Not suitable for gas condensate.
711	Black	- 10 + 225	+ 14 + 437	Petroleum products. Butane and propane (max. 100°C). Gasoline, kerosene, asphalt and bitumen, oils and most hydrocarbon solvents. Also suitable for gases (max. 170°C). Cold and hot air. Not suitable for hot water, strong alkalis and aromatic solvents.

Special Lubricants - normally to be used only where the standard lubricants cannot be used.

Lubricant no. PR	Colour of compound	Temperature Range		RECOMMENDATIONS
		C	F	
40	Clear	- 10 + 100	+ 14 + 212	Cold and warm water. General Aqueous Solutions. Alcohols.
45	Yellowish- beige clear	- 10 + 130	+ 14 + 266	For water at max. 100°C, drinking-water, beer, mine- ral water, milk, cocoa, cream, ammonia compound, acids and alkali desinfectant, fruit-acid and alcohol.
60	White	- 30 + 250	- 22 + 482	All diluted and concentrated acids and lyes, fluorine, chlorine, bromine, iodine, phosphorus oxychloride, ozone, hydrogen peroxide, all organic solvents (except hydrogen fluoride), all mineral, vegetable and animal oils and fats. Do not affect elastomers and plastics.
103	Green	- 30 + 200	- 22 + 392	General purpose synthetic sealant for liquid and gaseous aliphatic hydrocarbon service suitable for gasoline, kerosene, fuel oils, crude distillates, aviation and jet fuel, natural gas. Not suitable for steam, aromatic solvents, strong acids and alkalies.
280	Black	- 10 + 200	+ 14 + 392	Cold and hot air up to 200°C. Cold and hot water up to 180°C. Cold and hot gases up to 150°C. Not suitable for strong acids, petroleum products and aromatic and chlorinated solvents.
* 330	White	- 30 + 250	- 22 + 482	Hot water and gases. Natural gas, propane, butane, asphalt and bitumen. General chemical aqueous solutions eg. alkalis and dilute acids. It is useful for hot air. Not suitable for light liquid hydrocarbons, aromatic and chlorinated solvents and strong mineral acids.

* This type of lubricant ought to be avoided, if one of the other types can be used, as this contain silicone oil. The operating torque of the valve will increase considerably.
For exceptional working conditions and services not mentioned in the table, please ask for further information.

TAPER PLUG VALVES

Materials of construction
and colour codes

CAST IRON

ASTM A 126 Class B (High strength grey iron).

Tensile Strength: min. 31000 PSI (214 N/mm²).

Cast Iron material is very economical and suitable for most common service conditions such as air, water, gas and oil at medium pressures and temperatures. It possesses good resistance to corrosion in most organic solutions, alkalies and many acids of higher concentrations at normal temperatures. Plugs are anti-friction treated with P.T.F.E.

DUCTILE IRON (Cast Iron with spheroidal Graphite).

ASTM A 536 Gr. 60-40-18.

Tensile Strength: min. 60000 PSI (414 N/mm²).

This material is especially used where cast iron does not fulfil the requirements and where cast steel is too expensive.

Plugs are anti-friction treated with P.T.F.E.

CARBON STEEL

ASTM A 216 Grade WCB.

Tensile Strength: min. 70000 PSI (485 N/mm²).

The valves of cast steel are made in accordance with the specification of the mentioned ASTM standard.

To counteract seizing steel plugs have a thin coat 20 µm of electroless nickel, and then anti-friction treated with P.T.F.E.

Carbon steel is suited for valves in cold or hot water services without corrosive impurities. It is also suitable for oil, gas, air and other line fluids where valves are required of high strength, toughness and stability against vibration, blows and fire, except for extremely high or low temperatures which require steel alloys.

Our valves are also available to NACE Standard MR-01-75. Hardness level of Rc 22 or lower.

LEAD-BRONZE 80/10/10

CuPb10Sn10. ISO 1338 - ASTM B30 937.

Tensile Strength: min. 12500 PSI (180 N/mm²).

Brinell Hardness: 65

Chemical Properties: Resistant to actions of ordinary services.

Physical Properties: Good pressure tightness and resistant to wear.

Other alloys, fx. 90/10 or 88/10/2,0 are delivered on inquiry.

STAINLESS ACID-RESISTING STEEL

Rust and acid resisting.

Chromium	Nickel	Molybdenum
----------	--------	------------

Cr 18% to 21%	9 to 12%	2 to 3%
---------------	----------	---------

ASTM A 351 Grade CF8M or AISI 316.

Tensile Strength: min. 70000 PSI (485 N/mm²).

To counteract seizing plugs in stainless steel have a thin coat 20 µm of electroless nickel, and then anti-friction treated with P.T.F.E.

AUSTENITIC - FERRITIC STEEL. (Duplex stainless steel)

ASTM A 890 4A,

Chromium	Nickel	Molybdenum	Nitrogen
----------	--------	------------	----------

Cr 22%	Ni 5%	Mo 2,5%	N 0.1%
--------	-------	---------	--------

Tensile strength: min. 620 N/mm².

The materials A 890 4A are austenitic-ferritic acid-resistant steel with very high mechanical properties. Moreover they are extremely resistant to corrosion.

The materials A 890 4A are very resistant to stress - (SCC) and pitting corrosion in environments containing chloride. The resistance to stress corrosion (SCC) caused by hydrogen sulphide in environments containing chloride is also excellent.

The materials A 890 4A meet the demands usually requiring high alloyed nickel qualities. As the content of chromium and nickel is fairly low these materials will prove an economically good alternative to more expensive high alloyed qualities.

To counteract seizing plugs in stainless steel have a thin coat 20 µm of electroless nickel, and then anti-friction treated with P.T.F.E.

SPECIAL QUALITIES AND ALLOYS: Tests which exceed the requirements of the respective standards can be carried out on the above mentioned materials if required.

Special alloys are manufactured on request.

COLOUR CODE

To facilitate identification the valves are normally painted as follows:

Cast Iron : Green	Steel : Blue	Stainless Steel : Silver grey
Ductile : Dark grey Bronze	: Unpainted	Duplex : Light grey

TAPER PLUG VALVES

Pressure Test / Inspection

After assembling, before delivery, all Christensen Plug Valves pass through a careful pressure test. The test is carried out acc. to the following standards: ASME B 16.34, BS 1560, BS 6755 API 598 and ASME B16.1.

If the customer or his representative wants to participate at the test - or, if there are special requirements to the pressure testing, this must be arranged with the manufacturer and stipulated in the purchase order.

TAPER PLUG VALVES

Manual Lubricant Gun type BC-1.

Cartridge for Lubricant Gun 300 ccm.

Pneumatic Lubricant Gun type BC-2
Working Pressures: Max. 8 Bar (115 Psi).

Cartridge for Lubricant Gun 1250 ccm.

Grease Gun for Gear Lubrication type 315-2

Grease for bearings:

BCH G10

Grease for worms and gear wheel:

BCH G10
